Time from study recruitment (days)

This table provides the number of subjects at risk for each fibre quantile group at five specific time points: 0, 500, 1000, 1500, and 2000 days. The data shows that all groups start with 146 subjects at day 0. By day 2000, the number of subjects at risk has decreased significantly, with the [0,17) group having the highest remaining count of 1 subject.
