Time from study recruitment (days)

Detailed description: This table provides the number of individuals at risk for each meat intake quantile group at three time points (0, 500, 1000, 1500, 2000 days). The [0,60) group consistently has the highest number of individuals at risk, followed by [60,99.8), [99.8,151), and [151,607]. The number of individuals at risk decreases over time for all groups, with the [151,607] group showing the steepest decline after day 1000.
