Time from study recruitment (days)

This table provides the number of individuals at risk for each fruit intake quantile at five specific time points: 0, 500, 1000, 1500, and 2000 days. The data shows that the [0,2.1) quantile consistently has the highest number of individuals at risk across all time points, while the [10.4,62.9] quantile has the lowest.
