Time from study recruitment (days)

Detailed description: This table provides the number of individuals at risk for each red meat intake quantile group at specific time points (0, 500, 1000, 1500, 2000 days). The number of individuals at risk generally decreases over time, with the group with the highest intake ([0.861,9.11]) showing the most significant reduction in sample size by day 2000.
