Time from study recruitment (days)

Detailed description: This table provides the 'Number at risk' for each bread/cereal intake quantile group at three time points: 0, 500, and 1000 days. The table also includes columns for 1500 and 2000 days, which likely represent the final follow-up points or censored times. The data shows that the number at risk generally decreases over time, with some fluctuations between the different intake groups.
