Time from study recruitment (days)

Detailed description: This table provides the number of individuals at risk for each quantile group at three specific time points (0, 500, and 1000 days) and at the end of the study (1500 and 2000 days). The data shows a general decrease in the number of individuals at risk over time, with the group in the highest meat intake quantile consistently having the largest number of individuals remaining at risk throughout the study duration.
