

# Time to objective flare

Fish intake quantiles [0,16.4) [16.4,36.5) [36.5,65.8) [65.8,647]

## Number at risk

Time	[0,16.4)	[16.4,36.5)	[36.5,65.8)	[65.8,647]
0	263	223	173	93
500	223	193	102	12
1000	173	190	88	10
1500	93	93	93	11
2000	42	42	42	8

Number at risk

Time from study recruitment (days)

This table provides the number of individuals at risk for each fish intake quantile at specific time points. The data is presented in five-year intervals, starting from day 0 and ending at day 2000. The number of individuals at risk generally decreases over time, with the group with the highest fish intake ([0,16.4)) consistently having the fewest individuals at risk compared to the other groups.
