Time from study recruitment (days)

Detailed description: This is a 'Number at risk' table corresponding to the survival analysis above. It shows the number of individuals at risk at three time points (500, 1000, 1500 days) and at the end of the study (2000 days) for each of the four meat protein quantile groups. The numbers generally decrease over time, indicating events (flares) have occurred.
