

Time to patient-reported flare

Fish intake quantiles [0,16.4] [16.4,37.2] [37.2,66.6] [66.6,494]

Number at risk

Fish intake quantiles	0	200	400	600	800
[0,16.4]	100	81	69	65	0
[16.4,37.2]	103	89	80	76	0
[37.2,66.6]	99	82	69	65	0
[66.6,494]	104	80	72	68	0

Time from study recruitment (days)

Detailed description: This table provides the 'Number at risk' for each fish intake quantile at various time points. The columns represent time points at 0, 200, 400, 600, and 800 days. The rows represent the four fish intake quantiles. The numbers show that the number of patients at risk decreases over time, with the highest quantile (66.6-494) maintaining the highest number of patients at risk until approximately 400 days, after which the numbers converge.
