Time from study recruitment (days)

Detailed description: This table provides the number of patients at risk for each fish intake quantile group at four specific time points (0, 200, 400, 600, and 800 days) and at the end of the study. The number of patients at risk generally decreases over time, with the [0,16.4] group showing the most significant drop by day 200.
