Time from study recruitment (days)

Detailed description: This table provides the number of patients at risk at three time points (0, 500, 1000, 1500, and 2000 days) for each of the four UPF groups. The number of patients at risk decreases over time for all groups, with the most significant drop occurring between 1000 and 1500 days. The 'Number at risk' table shows that the group with the highest UPF (52.6-92.5%) had the largest number of patients at risk throughout the study period.
