Time from study recruitment (days)

Detailed description: This table provides the 'Number at risk' for each white meat intake quantile group at three time points: 0, 500, and 1000 days, and at the end of the study (2000 days). The data is taken from the Kaplan-Meier survival plot above. The number at risk decreases over time, with the highest number at risk being 205 at day 0 and the lowest being 9 at day 2000.
