Time from study recruitment (days)

Detailed description: This table provides the number of individuals at risk for each meat intake quantile group at three specific time points: day 0, day 500, and day 1000. At day 0, all groups have 200+ individuals at risk. By day 500, the numbers decrease to approximately 185-186 for the first two groups and 179 for the third group. By day 1000, the numbers further decrease to approximately 149, 137, and 151 respectively. The fourth group shows the highest number of individuals at risk throughout the observed period.
