Time from study recruitment (days)

Detailed description: This table provides the number of individuals at risk for each meat intake quantile group at three time points: 0, 500, and 1000 days, and at the end of the study (2000 days). The [0,60) group consistently has the highest number of individuals at risk, followed by the [60,99.8) group. The [99.8,151) and [151,607] groups have the lowest numbers at risk throughout the study period.
