Time from study recruitment (days)

Detailed description: This table provides the number of individuals at risk for each white fish intake quantile group at three time points (0, 500, 1000, 1500, and 2000 days). The number of individuals at risk generally decreases over time, with the group with the highest intake (2.88-18) consistently having the largest number of individuals at risk throughout the study period.
